The european wire die maker

REDIES

we repair your dies

BEFORE

palpable problems:

- drawing forces increase
- incomplete lubrication
- wire product not round
- unsatisfactory wire surface
- wire diameter too big

visible problems:

- ring-shaped indentation
- polish damaged
- holes

Material to be removed →

Natural Diamond + PCD +
Tungsten Carbide

AFTER

- geometry and proportions remain
 - technically a new die*
 - back relief enhances performance
 - repairing saves resources
- ...and two thirds of your money, on average

*quality depends on the blank. Crystal misalignment, for example, cannot be corrected for.

**technically new +
economically advantageous**
